ABSTRACT

Entrepreneurship which can be understood as the mind set and process to create and develop economic activities. In today's economic entrepreneurship is seen as vital source for economic growth and competitiveness, job creation as well as wealth creation and providing societal interest. The present study was an attempt to assess the attitude of B.Sc. (Agri.) VIIIth semester agricultural students towards entrepreneurship at College of Agriculture in Parbhani. The study has conducted within a surveying methodology by using questionnaire. Statistical population of the study consisted of 20 students of each Experiential Learning Module, i) Ground nut Production Technology-Agronomy, ii) Milk and Milk Products- Dairy, iii) Mushroom Production Technology- Plant Pathology, iv) Commercial Vegetable Production-Horticulture, v) Soil Water Plant and Fertilizer Analysis Laboratory- Soil Science vi) Commercial Sericulture, thus 120 agricultural graduating students samples were selected randomly. A five point Likert scale questions (Strongly Agree, Agree, Undecided, Disagree, and Strongly Disagree) was used. More than half of the respondents (51.66 %) was having medium annual family income (Rs. 60001 to 2,00,000), maximum number of respondents (57.50 %) had medium level social participation, with regards to gender, it was observed that more than two third (76.67 %), of the respondents were male. Majority of the respondents (62.50 %) had living in joint type of family. Near about thirty per cent (29.17 %) of the respondent had semi medium land holding, majority of respondents (82.50 %) had belong to rural back ground, majority respondents (61.67 %) had medium family size, (5 to 7 members), Academic performance (CGPA) of majority (64.17 %) of the respondents had possessed second class. As for as scholarship holding by the respondent is concerned majority (55.83 %) respondents reported that they got GOI scholarship. It was noticed that majority of the respondents (64.16 %) were agreed that they know the techniques for findings out what the market wants. As for as the sensitization of respondents towards entrepreneurship is concern, it is observed that more than forty per cent of the respondents (41.67 %) have agreed and 31.66 per cent strongly agreed that they clearly followed or assisted friends who have started entrepreneur. It was delineated that majority (65.00 %) and (49.17 %) of the respondents were strongly agreed that entrepreneurship improves individual and social growth and entrepreneurship results in employability & income generation, respectively. It is observed that majority (72.50 %) of the respondents had favourable attitude towards the entrepreneurship.

Key Words : Entrepreneurship, Attitude, Students, Sensitization, Tendencies

INTRODUCTION

The role of education has been conformed as a important component in the creation and continuing development of entrepreneurial attitude. In this context students are seen as the primary

How to cite this Article: Deshmukh, P.R. and Kadam, R.P. (2015). Attitude to entrepreneurship: What do IVth year Agriculture graduates think. *Internat. J. Appl. Soc. Sci.*, 2 (3&4) : 122-129.

resource of future entrepreneur. However there is a need to understand how to develop and nurture potential entrepreneur further while continuing to grow in entrepreneurship education, our understanding of students in respect to entrepreneurial education is still lacking.

There are numerous interconnections between attitudes and various interrelated objects. Attitudes would measure the extent of individual values positively or negatively. Generally, the behaviour of an individual is greatly determined by his/her attitude.

Further attitude has been defined as a feeling or evaluative reaction to an idea, object or situation. It depicts how positive or negative, favourable or unfavourable a person feels towards that particular idea, object, or situation in question. Accordingly, the positive or negative attitude of the students towards entrepreneurial activities is a function of his / her held beliefs on those attributes associated with entrepreneurship. In other words for entrepreneurship program to be implemented successfully, there is a need to determine the attributes associated with entrepreneurship and the attitude towards them.

METHODOLOGY

The present study was an attempt to assess the attitude of B.Sc. (Agri.) IVth year agricultural students towards entrepreneurship at College of Agriculture in Parbhani. The study has conducted within a surveying methodology by using questionnaire. Statistical population of the study consisted of 20 students of each Experiential Learning Module i) Ground nut Production Technology-Agronomy, ii) Milk and Milk Products- Dairy, iii) Mushroom Production Technology- Plant Pathology, iv) Commercial Vegetable Production-Horticulture, v) Soil Water Plant and Fertilizer Analysis Laboratory- Soil Science vi) Commercial Sericulture, thus 120 agricultural graduating students samples were selected randomly.

Data gathering tool was a questionnaire a paper based survey was used in order to allow the survey to achieve high coverage as the questionnaires could be given directly to students and collected at the same time, which was structured around two parts. The first part was related to personal characteristics such as gender, Annual family income, social participation, family type, land holding, family size, family background, academic performance and scholarship. In the second part, as the most important section of the questionnaire. In particular, the research question for this study includes:

- i) Personal entrepreneurship capability
- ii) Sensitization of respondents towards Entrepreneurship
- iii) Interest in studying Entrepreneurial concepts
- iv) Tendencies for becoming self employed v/s being an employee

A five point Likert scale questions (Strongly Agree, Agree, Undecided, Disagree, and Strongly Disagree) was used by above four sub head questions. Finally, with regard to positive response coding was done like Strongly Agree-5, Agree-4, Undecided-3, Disagree-2, and Strongly Disagree-1 or for negative questions reverse coded.

The data were subjected to statistical analysis with the help of frequency, percentage, mean, and standard deviation and co-efficient of correlation.

RESULTS AND DISCUSSION

The data with regards to profile of the respondents are presented in Table 1. More than half of the respondents (51.66 %) was medium (Rs. 60001 to 2,00,000) Annual Family Income, while 26.67 per cent and 21.67 per cent respondents were found in low (Up to Rs. 60,000) and high (above Rs. 2,00,000) annual family income category, respectively.

Maximum number of respondents (57.50 %) had medium level social participation, while 31.67

per cent and 10.83 per cent respondents had low and high social participation, respectively.

With regards to gender, it was observed that more than two third (76.67 %), of the respondents were male and (23.33 %) respondents were female.

Majority of the respondents (62.50 %) had living in joint type of family while 37.50 per cent of

them had belongs to nuclear family.

Near about thirty per cent (29.17 %) of the respondent had semi medium land holding, followed by small land holding (20.83 %), big (15.83 %) while 14.17 per cent were medium and 13.33 per cent landless whereas 6.67 per cent of the respondents were marginal land holder.

Large majority of respondents (82.50 %) had belonged to rural back ground, while 17.50 per cent of them had urban background.

Majority respondents (61.67 %) had medium family size, (5 to 7 members) while 21.67 per cent and 16.66 per cent of the respondents had small (Upto 4 members) and big family size (more than 7 members), respectively.

Academic performance (CGPA) of majority (64.17 %) of the respondents had possessed second class while 35.83 per cent respondents had first class, whereas none of the respondents was found pass class and first class with distinction.

As for as scholarship holding by the respondent is concerned majority (55.83 %) respondents reported that they got GOI scholarship, while 9.17 per cent and 5.00 per cent respondents holding other (NTS) and freeship, respectively.

The data regarding entrepreneurship capability of the respondents were collected under four sub areas, which are presented in table 2. It was noticed from table 2 that majority of the respondents (64.16 %) were agreed that they know the techniques for findings out what the market wants and more than fifty per cent of the respondents (58.34 %) understand the types of issues that confront an entrepreneur in taking an idea to market, while 34.17 per cent of respondents were strongly agreed that they can create a business plan and business concept. However, 55.00 per cent respondents agreed that they know how to legally finance a new business concept, 25.00 per cent respondents were strongly agreed that they understood the type of issues that confront an entrepreneur in taking an idea to market, 40.33 per cent respondents agreed that they can create a business plan and a business concept.

Over and above 24.17 per cent of respondents were undecided to know how to legally finance a new business, followed by equal percentage *i.e.* 11.67 per cent respondents were undecided that they can create a business plan and business concept and understand the type of issues that confront an entrepreneur in taking an idea to market.

As for as the sensitization of respondents towards entrepreneurship is concern, it is observed from table 3 that more than forty per cent of the respondents (41.67 %) have agreed and 31.66 per cent strongly agreed that they clearly followed or assisted friends who have started entrepreneur. Near about half of (49.00 %) respondents agreed that they regularly read books / articles about entrepreneurship. While 44.16 per cent respondents were agreed that they were closely followed or

Favourable (103 to 127)	87	72.50
Highly favourable (128 and above)	26	21.67
Mean = 115		SD: 12

disagreed that Entrepreneurship within an existing enterprise. Followed by 12.50 per cent respondents were undecided and 10.83 per cent were disagreed that entrepreneur are rich as compared to other.

The data presented in table 5 indicates that more than half of (57.50 %) the respondents were agreed that family/ friends are self employed, followed by 55.00 per cent respondents were strongly agreed that having own business is the most suitable option for them . While 54.16 per cent and 53.33 per cent respondents agreed that they have an idea that can be business opportunity and have possibilities for self fulfilment.

However, 52.50 per cent respondents were agreed that becoming self employment is more interesting work. While equal percentage *i.e.* 51.66 respondents were agreed that becoming self employed mean to avoid uncertainties related to employment and strongly agreed with becoming self employed mean a personal independence / managing own time, followed by 47.50 per cent and 46.67 per cent respondents were agreed that becoming self employed lead better income prospects and food family life and more prestigious than being employee, respectively.

It was further observed that 32.50 per cent and 27.50 per cent of the respondents were disagreed that for becoming self employed there is no need to adopt to business environment and it is normal thing to do, respectively, 25.84 per cent respondents also disagreed that lack of attractive employment opportunities. While 23.33 per cent respondents were undecided on there is no need to adopt two adopted to a business environment. Equal percentage of respondents 12.50 per cent was undecided about family / friends are self employed and avoid uncertainties related to employment.

The data with regard to respondent's overall attitude towards entrepreneurship are presented in Table 6.

It is observed from table 6 that majority (72.50 %) of the respondents had favourable attitude towards the entrepreneurship, while 21.67 and 5.83 per cent respondents had highly favourable and unfavourable attitude towards entrepreneurship, respectively. It means majority of the respondents were having favourable attitude regarding entrepreneurship in future.

Conclusions :

The Respondents had predominantly the profile as they were male, having rural background, medium annual family income, social participation, semi medium land holding belonging to joint and medium size family, sought GOI scholarship and possessed second class in academic performance.

Results revealed that agricultural students have a considerable high intention to entrepreneurship; this positive attitude can assist to formation new business for agricultural students as the potential entrepreneurs.
