ABSTRACT

Migration plays a significant role in moulding the social, economic and other structural characteristics of population of a country or a region. Migration is conventionally viewed as economically benefiting the family members who are left behind through remittances. However, splitting up families in this way may also have multiple adverse effects on economic condition, education, and health and socio-economic status for family members who do not migrate. Identifying the causal impact of migration on those who are left behind remains a challenging empirical question with inconclusive evidence. We are considering about their economic structure such as occupation, source of earning, pattern of expenditure, habit of the saving of money, household's possession, and household gadgets and so on. The prime aim of this paper is analysis the impact of migration on the Economic Status of the left behind population of Churu District. The study based on primary data collected from field survey.

Key Words : Muslim, Migration, Economic, Left behind Population

INTRODUCTION

This paper provides the impact of migration on economic status of the left behind population of the Churu district. As a matter of fact, migration plays a significant role on moulding the social, economic and other structural characteristics of population of a country or a region.

Although the economic emigrants main intension are to improve their economic prospects and those of their families left behind. Migration for employment is quite beneficial for economies of both sending and receiving countries as well as for economic and financial position of migrants at an aggregate and household level; however, it might come up with significant social costs of migrant households (Ratha *et al.*, 2011). Most migration studies conducted focus on the economic gains and very few focus on the social effects of family members left behind (Maphosa, 2005 and Thonge and Ncube, 2004). Gulati (1987) the purpose of the study was to assess the socio-economic impacts of male migration on those members

of the household, especially women, who are left behind. Saify (2008) studied about the 'Impact of migration on socio-economic development of Dawoodi Bohra's of Udaipur city'. She studied various causes responsible for the migration. She observed through various parameters the development in socio-economic level of the community. We are considering about economic structure such as occupational, pattern of expenditure, per capita income and household gadgets.

The study area:

Churu district is a part of Thar Desert sand dunes ranging from 6 to 30 meters are found here, which are located at Ratangarh, Srdarshahar and Churu Tehsil. The area of the district is 13835 sq km lying in the north east of the state. It is located between 27°24' to 29°0' north latitude and between 73°40' to 75°41' east longitude. The district extend 120 km from north to south and 150 km from east to west in length. The place was named as Churu after his name in Jangladesh region of the state. It

is bounded by Hanumangarh district in the north, Bikaner district in the west, Nagaur district in the south, Sikar district in the south-east, and Jhunjhunun district and boundaries of Haryana state in the east.

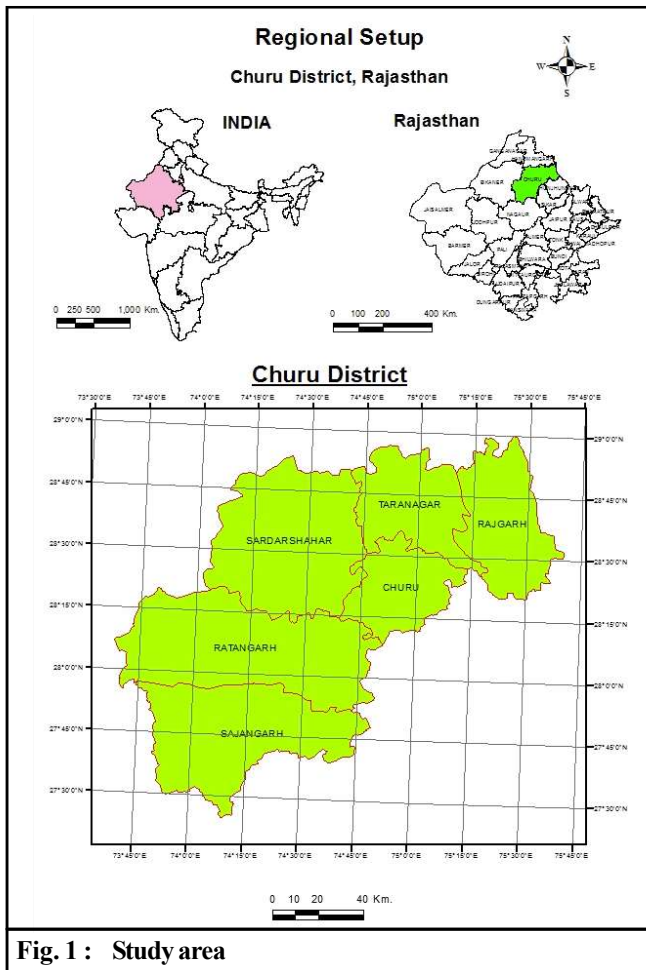

Fig. 1 : Study area

Objectives :

The main thrust of the proposed present study will be to find out the Economic Status in Churu District.

The specific objectives of the present study will be:

1) to find out the economic status among the Muslim migrant family.

METHODOLOGY

The study is based on primary data generated in a comprehensive field survey of Churu District of Rajasthan. A questionnaire was developed which was canvassed for securing necessary information to collect primary data from the study area. The survey consisted 50 households.

RESULTS AND DISCUSSION

Occupational structure of migrant families:

The term 'occupation' itself is indefinite as to both meaning and scope. It has a varying intellectual content and emotional association. In all modern languages, it has a number of synonyms and the range of their meanings indicates as to how much the specific content of this term has shifted through historical epochs (Encyclopaedia of Social Sciences, 1965).

Occupation implies trade or profession. It reveals the nature of economic progress of a country. It is related to service, agriculture and industry. Occupations depends up on the degree of economic development and sophistication of country. Occupational structure influences many aspects of population in a region. The occupational characteristics of population are reflected in the working force, dependency ratio, employment and unemployment.

Occupational structure has been classified in four categories:

Highly skilled:

Highly Skilled work employee is one who does the work which involves skill or competence of extra ordinary degree and possessor supervisory ability. They were enrolled as a Government officer or businessman, CEO, bankers etc.

Skilled:

Skilled employee is one who is cable of working independently and efficiently and turning out accurate. Doing job in Government office and private sectors, telephone operator, typist etc.

Semi – Skilled:

Semi- skilled employee is one who has sufficient knowledge of the particular trade or above to do respective work and simple job with the help of simple tools and machine. They were do job as assistant operator, electrician, technician etc.

Un – Skilled:

Un –Skilled employee is one who possesses no special training and whose work involve the performance of the simple duties which require the exercise although a familiarly with the occupational environment is necessary. Doing job in peon, cleaner, loader, crane man, helper, cleaner etc.

Table 1 and Fig. 1 describe that 29.51 per cent person enrolled in semi – skilled category followed by 26.23 per cent un – skilled, skilled (24.59 %) and 19.67 per cent comes in highly skilled category. They are doing job in respectively countries where they were migrant.

Table 1 : Occupational structure		
Occupational Structure	International	Intra - National
Highly Skilled	19.67	35.71
Skilled	24.59	28.57
Semi-Skilled	29.51	21.43
Un-Skilled	26.23	14.29
Total	100.00	100.00

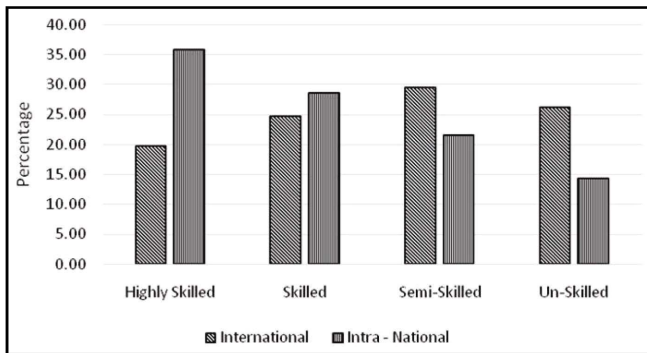

Fig. 1 : Percentage distribution of occupational structure

At intra – national level 35.71 per cent migrant comes in highly skilled category followed by skilled (28.57 %), semi – skilled (21.43 %) and 14.29 per cent as un – skilled.

Per capita monthly income is calculated by dividing the total monthly income to total number of family members.

44 per cent migrant household have more than Rs. 5000 to Rs. 10000 per capita income per month. 36 per cent household have Rs. 10000 to Rs. 20000 as per capita income and 14 per cent household have Rs. 20000 to Rs. 50000 as per capita income. Only 6 per cent household have Rs. 50,000 per capita income (Table 2 and Fig. 2).

Table 2 : Monthly per capita income of household	
Per Capita Income	Percentage
5000-10000	44.00
10000-20000	36.00
20000-50000	14.00
Above 50000	6.00
Total	100.00

Fig. 2 : Percentage distribution of monthly per capita income of household

All the household’s gadgets are converted into their cost and total cost of the household possession is calculated on the basis of the calculation all the Muslim migrant houses are taken into four categories. Maximum households (50 %) have gadgets of more than Rs. 100000. 26 per cent household have gadgets of Rs. 50000 to Rs. 100000 and 18 per cent have gadgets of Rs. 15000 to Rs. 50000. Whereas 6 per cent households have gadgets cost’s up to Rs. 15000 (Table 3 and Fig. 3).

Table 3 : Expenditure on household gadgets	
Expenditure on household gadgets	Percentage
Up to 15,000	6.00
15,000-50,000	18.00
50,000-100,000	26.00
Above 100,000	50.00
Total	100.00

Fig. 3 : Percentage distribution of household gadgets

Education play important role in human life. Table 4 and Fig. 4 describe the monthly expenditure of income of households on education. 60 per cent households of Churu migrant families spend Rs. 1000 to Rs. 5000 per month on education. 14 per cent household spend Rs.

5000 to Rs. 10000 per month on education and they send their children to private schools for get better education. 4 per cent families send more than Rs. 20000 per month on education followed by 2 per cent (Rs. 10000 to Rs. 20000). 14 per cent household have no expenditure on education.

Table 4 : Monthly expenditure on education	
Expenditure on Education	Percentage
No Expenditure	14.00
less than 1000	6.00
1000-5000	60.00
5000-10000	14.00
10000-20000	2.00
More than 20000	4.00
Total	100.00

Fig. 4 : Expenditure of education

Food is one of the basic needs of man. Monthly expenditure of income of households on food has been given in Table 5 and Fig. 5. It is clearly exhibits from Table 5 that the maximum proportion (36 %) of household used spent Rs. 10000 to Rs. 20000 from their monthly income on food. While 21 per cent household spend Rs. 5000 to Rs. 10000 monthly on the food, followed by Rs. 2000 to Rs. 5000 (14 %) and below Rs. 2000 (12 %). 17 per cent family spend more than Rs. 20000 on food because they lived in a joint family.

Table 5 : Monthly expenditure on food	
Expenditure on Food	Percentage
Below 2000	12.00
2000-5000	14.00
5000-10000	21.00
10000-20000	36.00
Above 20000	17.00
Total	100.00

Fig. 9 : Percentage distribution of monthly expenditure of household on cable connection

Conclusion :

The research focuses on the direct impact of Muslim migration on the economic status of the left behind

population in Churu. Majority of the emigrants were working in semi – skilled category. But, just after along migration, all of them were in semi – skilled or unskilled services, gradually, they adopted in foreign environment, earn money and started their own business and sent remittance to their families. So they can live a good life. Remittances can be sent in cash or kind.

When we talk about income, income is the sum of all wages, salaries, profits, and other forms of earning received in a given period of time. 36 per cent migrants have Rs. 10000 to Rs. 20000 per capita income per month and 17 per cent having per capita income up to Rs. 20000. Maximum households have gadgets and they having higher living index. Lack of job opportunity and insufficient income are the main reasons for migration, therefore the government needs to provide supports for local agricultural production.
